

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A method of cleaning comprising the steps of:
selecting a substantially non-reactive, non-aqueous, non-oleophilic, apolar working fluid;
wherein said non-reactive, non-aqueous, non-oleophilic, apolar working fluid under standard conditions is further characterized by: a KB value less than approximately 30; a surface tension less than approximately 35 dynes/cm²; and a solubility in water less than 10%.
selecting at least one washing adjuvant;
bringing said working fluid and adjuvant in contact with the fabric;
applying mechanical energy to provide relative movement within said fabric;
separating said working fluid from the fabric;
cooling the working fluid for decreasing the dissolved soils in the working fluid; and
filtering the permeate from the above step through a cross membrane filter.
2. (Original) The method of claim 1 including the further step of filtering the permeate from the above step through an adsorbent bed filter.
3. (Original) The method of claim 1 wherein vapors from said working fluid are treated by a high speed spinning disc which removes said working fluid and water vapor from the air stream.
4. (Original) The method of claim 3 including the step of cooling the vapor contacted by the spinning disc.
5. (Original) The method of claim 1 wherein said working fluid may have impurities of not more than approximately 20 %.
6. (Original) The method of claim 1 wherein the washing adjuvant is selected from a group consisting of: builders, surfactants, enzymes, bleach activators, bleach catalysts, bleach boosters, bleaches, alkalinity sources, antibacterial agents, colorants, perfumes, pro-perfumes, finishing aids, lime soap dispersants, composition malodor control agents, odor neutralizers,

polymeric dye transfer inhibiting agents, crystal growth inhibitors, photobleaches, heavy metal ion sequestrants, anti-tarnishing agents, anti-microbial agents, anti-oxidants, linkers, anti-redeposition agents, electrolytes, pH modifiers, thickeners, abrasives, divalent or trivalent ions, metal ion salts, enzyme stabilizers, corrosion inhibitors, diamines or polyamines or alkoxylates, suds stabilizing polymers, solvents, process aids, fabric softening agents, optical brighteners, hydrotropes, water, suds or foam suppressors, suds or foam boosters, fabric softeners, antistatic agents, dye fixatives, dye abrasion inhibitors, anti-crocking agents, wrinkle reduction agents, wrinkle resistance agents, soil release polymers, soil repellency agents, sunscreen agents, anti-fade agents and mixtures thereof.

7. (Original) The method of claim 6 wherein a preferred surfactant for the system will have a hydrophilic-lipophilic balance from approximately 3 to 14.

8. (Original) A method of cleaning comprising the steps of:
selecting a substantially non-reactive, non-aqueous, non-oleophilic, apolar working fluid;
selecting at least one washing adjuvant;
bringing said working fluid and adjuvant in contact with the fabric;
applying mechanical energy to provide relative movement within said fabric;
separating said working fluid from the fabric;
cooling the working fluid for decreasing the dissolved soils in the working fluid; and
filtering said working fluid, wherein said working fluid may have impurities of not more than approximately 20 %..

9. (Original) The method of claim 8 wherein said non-reactive, non-aqueous, non-oleophilic, apolar working fluid under standard conditions is further characterized by: a KB value less than approximately 30; a surface tension less than approximately 35 dynes/cm²; and a solubility in water less than 10%.

10. (Original) The method of claim 9 including the step of filtering the permeate from the above step through a cross membrane filter.

11. (Original) The method of claim 10 including the further step of filtering the permeate from the above step through an adsorbent bed filter.

12. (Original) The method of claim 8 wherein vapors from said working fluid are treated by a high speed spinning disc which removes said working fluid and water vapor from the air stream.

13. (Original) The method of claim 12 including the step of cooling the vapor contacted by the spinning disc.

14-78. (Cancelled)
